

FORECAST OF THE STATE POPULATION BY AGE AND SEX: 1990 TO 2030

NOVEMBER 2002 FORECAST

Technical Notes

The starting point of this 2002 forecast is the 2000 census population by age and sex, actual vital events through December 31, 2001, and the April 1, 2002 estimate of the state's population. A 1990 decennial Washington State life table was used to survive the population. Projections of life expectancy are based on Table B-1 in *Current Population Reports*, Series P-25, No. 1104, November 1994, U. S. Bureau of the Census. Age-specific fertility projections are based on Table-1 in *Current Population Reports*, Series P-25, No. 1104, November 1994, U. S. Bureau of the Census. Economic data used for developing the forecast of net migration provided by the Economic and Revenue Forecast Council, State of Washington (September 2003) and **DRI-WEFA**.

1. The forecast for 2002 is based on Census 2000 population counts by age and gender. Similar to the 2001 release, revised annual estimates for the 1990s decade are also provided. The revised series is based on the 1990 and 2000 census counts and data that track annual change through the decade. The 1990s intercensal population series is still considered provisional and will be redone before 2005.
2. The **natural increase** component of population change includes actual vital events through December 2001. Forecast fertility and mortality assumptions track with Bureau of the Census assumptions with adjustments made for Washington. A 1990 decennial Washington State life table is used to survive the population. Projections of life expectancy are based on Table B-1 in *Current Population Reports*, Series P-25, No. 1104, November 1994, U. S. Bureau of the Census. Age-specific fertility projections are based on Table-1 in *Current Population Reports*, Series P-25, No. 1104, November 1994, U. S. Bureau of the Census.

Forecast near-term and long-term **net migration** are based on an econometric model relating Washington's net migration to traded sector employment change. "Traded sectors" are industries which export goods and services to other states and abroad. Historical migration rates are also used to develop long-range (beyond 2005) migration expectations. Near-term migration, through 2005, is based strictly on the net migration model. The model relates the attractiveness of Washington's employment opportunities—in terms of employment change—to job opportunities in California and the nation as a whole. Please consult the migration section for details. The distribution of net migrants by age and sex is primarily derived from intercensal (1980-1990) estimates of the age-sex structure of migration for Washington State.

At present, there is very little difference in the 2001 and 2002 forecasts. By 2005, the state population in the 2002 forecast is 6,230,000 compared to 6,233,300 forecast last year.

OFFICE OF FINANCIAL MANAGEMENT

COMPARISON OF ANNUAL PERCENT POPULATION CHANGE IN STATE FORECASTS

	November 2001 Forecast	November 2002 Forecast
2000-01	1.37	1.37
2001-02	1.13	1.12
2002-03	0.96	0.94
2003-04	1.06	0.97
2004-05	1.10	1.17
2000-2005	5.76	5.70

General Discussion of State Growth

Washington's population has increased by about 20 percent per decade from 1960 through the year 2000—adding a total of 1,027,000 over the 1990s. State growth, which slowed in the late 1990s, temporarily rebounded from an annual change of 63,000 in 2000 to 80,800 in 2001, and then dipped to 66,800 in 2002. Growth is expected to slow to 56,900 in 2003, remain slow through 2004, and then gradually rise to over 80,000 per year by 2007.

Washington State shows strong historical population growth Forecast growth is in line with historical experience

OFM FORECASTING DIVISION

NOVEMBER 2002

Near-term population growth in Washington should be considered somewhat tentative—given additional reductions in aerospace employment after Boeing contract losses to Airbus, workforce reductions in other major Washington employers as such as Weyerhaeuser, and continuing declines in consumer confidence and spending. Numerous factors could intervene to hasten or impede state and national economic recovery

High and low long-term growth alternatives were prepared as part of the Growth Management Population Projections package in January 2002. These projections are available and remain valid because of the minimal difference between the 2001 and 2002 state level forecasts.

The following sections discuss the specific components of population change.

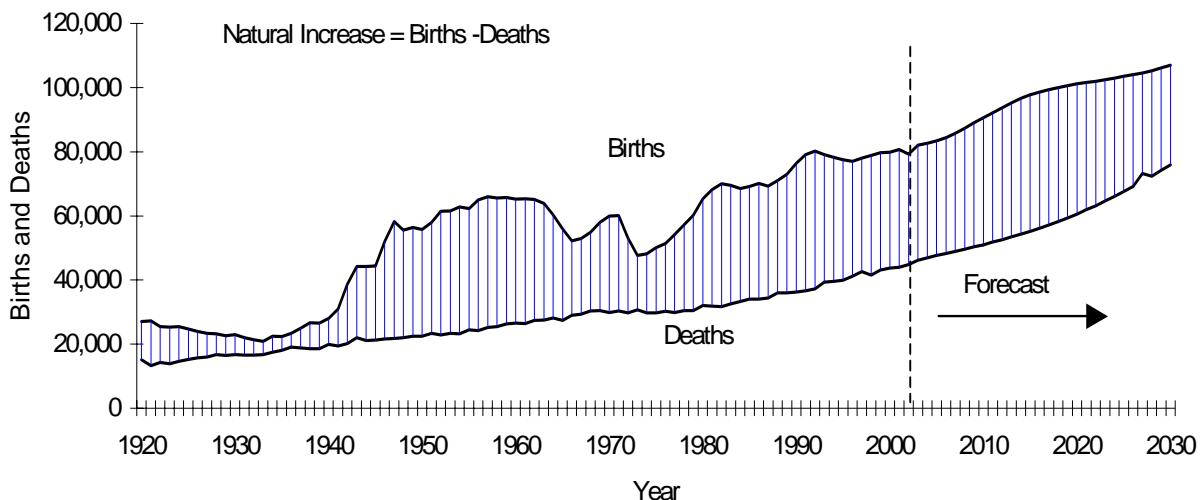

Components of Population Change: 1990 to 2030

Population At End Of Period	Population Change Number	Population Change Percent	Components of Change from Previous Period							
			Births		Deaths		Natural Increase	Net Migration Number	Rate	
1990-1991	5,021,335	154,643	3.18	79,076	15.99	36,575	7.40	42,501	112,142	22.68
1991-1992	5,141,177	119,842	2.39	80,236	15.79	37,160	7.31	43,076	76,766	15.11
1992-1993	5,265,688	124,511	2.42	79,077	15.20	39,353	7.56	39,724	84,787	16.29
1993-1994	5,364,338	98,650	1.87	78,194	14.71	39,535	7.44	38,659	59,991	11.29
1994-1995	5,470,104	105,766	1.97	77,453	14.30	39,957	7.38	37,496	68,270	12.60

Population and Components of Change

The components of population change are births, deaths, and migration. The excess of births over deaths is called natural increase. Persons moving to Washington (in migration) minus persons leaving the state (out migration) is net migration. The table on the facing page shows the components of population change for 1991 through 2030. Births from 1990 through 2001 are actual vital events.

Natural increase will continue to be an important contributor to state population growth

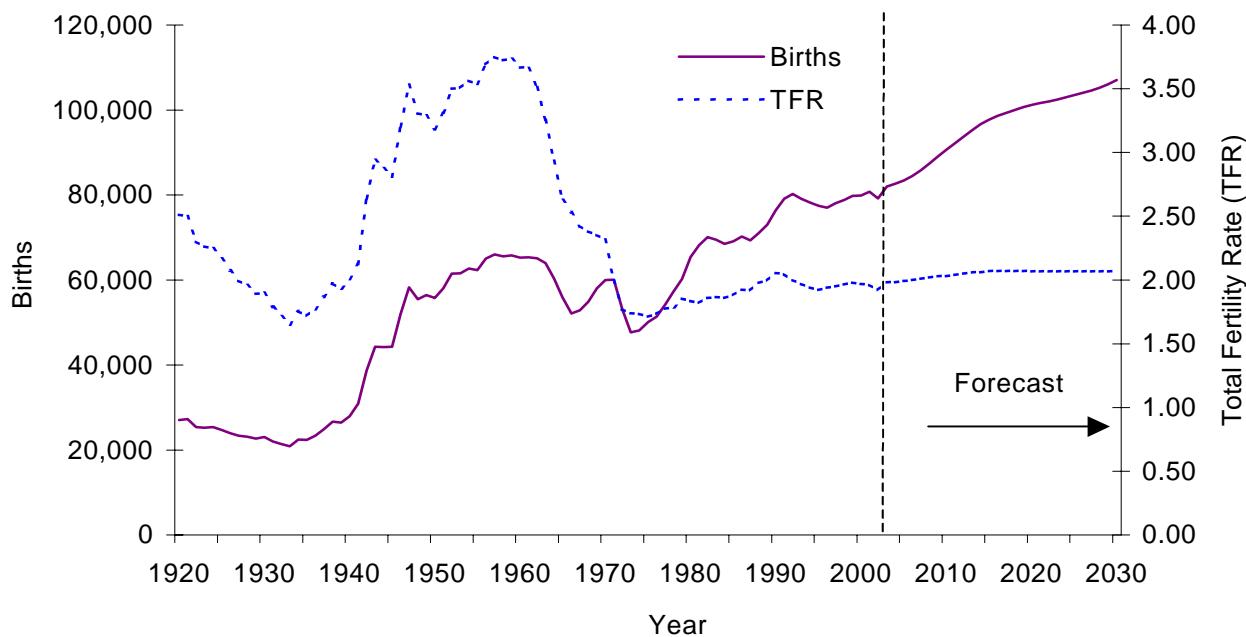

Fertility

Historic fertility levels in Washington, as in the nation, have followed a roller coaster pattern. However, since the mid-1980s, the state's total fertility rate (TFR)—the average number of births per woman—has remained relatively constant. The average number of births per woman is actually a hypothetical value. It is the average lifetime births expected by a group of women if they followed the age-specific birth rates for a given year.

Actual birth levels in Washington increased and then stabilized as the Baby Boom generation aged to have children. Births are expected to rise again as this new group of youngsters reach adulthood and begin their families. Thus, even though total fertility is expected to remain relatively constant, changes in the number of women of childbearing age will continue to cause some fluctuation in fertility levels. The following outline shows some of the historic fertility peaks and valleys.

Year	Social and Economic Climate	Number of Annual Births	Average Number of Births Per Woman
1933	Bottom of the Depression	20,800	1.6
1957	Peak of Baby Boom, economic prosperity	65,900	3.7
1975	Increases in working women, increased age at first marriage, and delayed childbearing.	49,500	1.7
1980s	Children of the Baby Boomers reach adulthood.	68,000 to 71,000	1.8 to 2.0
Early 1990s	Slight rise in fertility rates, delayed first/or second births recognized.	79,000 to 80,000	2.0 to 2.04
Late 1990s to 2000	Modest fluctuations in fertility levels down and then up. Fewer women in peak childbearing age.	77,000 to 79,800	1.93 to 1.97
<hr/> -----Forecast-----			
2001-2030	Forecast follows U.S. Census Bureau national forecast assumptions. No major changes in average births per woman.	Births gradually increase from 80,000 to 107,000 by 2030	1.97 to 2.07

Number of births per woman is expected to be low but a large number of women will have children between 1990 and 2030

If women were currently having children at birth rates comparable to the Baby Boom years—births would total 145,000 births per year. By the year 2030 there would be nearly 200,000 births per year. There is no indication that high fertility rates will return—not given the high level of women's participation in the labor force, delayed marriage, and delayed childbearing after marriage.

Mortality

The first half of the 1900s saw dramatic improvements in nutrition and health care that reduced infant deaths and markedly increased life expectancy. After that time, gains in infant health and life expectancy continued, but at a slower pace. Infant death rates are now quite low. Bureau of the Census research indicates that from the late 1990s forward, no medical breakthroughs are anticipated that will greatly increase life expectancy. Gains in life expectancy are expected to come from improved maternal health care, lifestyle changes, and treatment of hypertension.

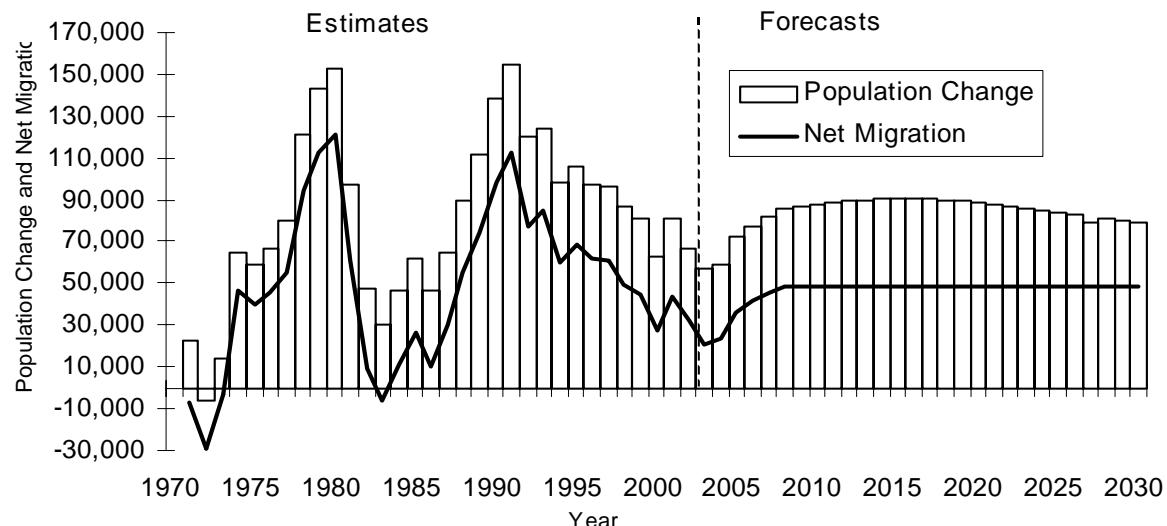

The following outline shows improvements in life expectancy over time and future expectations.

Year	Infant Mortality/Comments	Number of Annual Deaths	Life Expectancy in Years	
			Male	Female
1920s	Large proportion of deaths to infants in first year of life—approximately 56 per 1,000.	15,000	58	60
1960	Major advances in nutrition and medicine occurred between 1920 and 1960. Infant mortality reduced to 23 per 1,000.	26,500	68	75
1980	Infant mortality reduced to 12 per 1,000.	32,000	72	79
Late 1990s through 2001	Large improvements in life expectancy unlikely. Infant mortality 8 per 1,000.	43,000 to 44,000	74	80
	-----Forecast-----			
2005	Forecast follows U.S. Census Bureau's recent national forecast assumptions.	47,600	75	81
2015		55,200	76	82
2025		67,600	77	83
2030		75,900		

Migration

Migration, the most variable component of population change, is largely an economic phenomenon relating to push and pull factors. Migration usually varies as the result of changing economic conditions in Washington relative to other states. Some migration, such as military movements or the migration of retired persons, is not economic.

Net migration is a major contributor to population change in Washington State

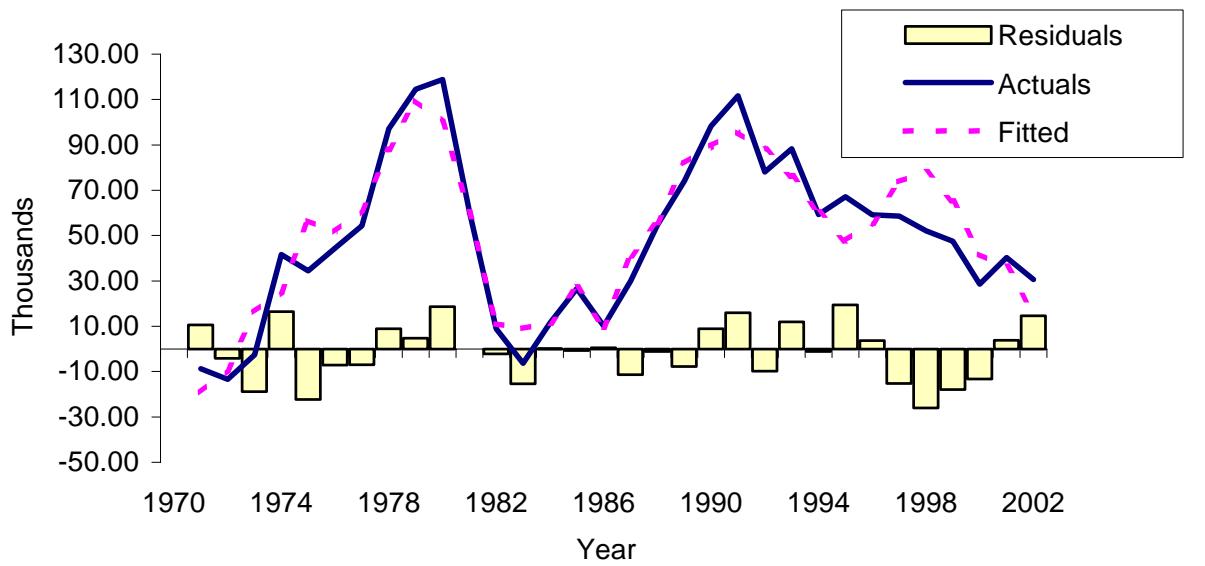

OFM FORECASTING DIVISION

NOVEMBER 2002

Annual migration is developed separately for three time periods: (1) historical and current estimates, (2) near term projections, and (3) long term projections.

Year(s)	Method	Distinguishing Characteristics Of Method	Data and Assumptions (if applicable)
1990 through 2000	Census and Intercensal Estimates (Provisional)	<i>Decade population change from census counts with estimates of annual change based on actual change in symptomatic data</i>	School enrollment and housing
2001 and 2002	Estimates	Developed from Component Method II, the Housing Unit Method, and Regression	School enrollment, housing, vital events, auto, registration, voters, drivers licenses, Medicare data, and others
2003	Estimate (Provisional)	Developed from Component Method II	School enrollment, vital events, and Medicare in Component Method II estimate
2004 and 2005	Near Term Projection	Regression model relating net migration to the state's near term relative economic performance.	Economic and Revenue Forecast Council (Sept. 2002) Employment forecasts and October 2002 DRI-WERA forecasts for the U.S. and California. Washington's traded sector job growth becomes weaker than the U.S. and California due to the slowdown in high tech manufacturing and a decline in aerospace employment.
2006 and 2007	Transition Period		Two-year transition period blending the near term and long term migration projection
2008 through 2030	Long Term Projection	Developed from the regression model and historical migration trends. <i>Results expressed as average annual migration.</i>	OFM Long-term employment forecasts. Washington's traded sector and producer services employment is expected to outperform the U.S. and California.

Comparison of actual and predicted net migration using OFM's model, 1970-2002

OFM FORECASTING DIVISION

NOVEMBER 2002

Projected migration is modeled with econometric techniques that integrate economic performance expectations with population outcomes by quantitatively relating changes in traded sector employment to net migration. Briefly, the model specifies that the civilian net migration level is determined by four factors:

- The relative growth of “traded sector” employment in Washington State to that in the U.S. as a whole.
- The relative growth of “traded sector” employment in Washington State to that in California.
- The U.S. unemployment rate.
- A national recession indicator.

“Traded” industries include manufacturing, federal civilian government, and producer services (services purchased by businesses). Changes in state traded sector employment are closely associated with varying levels of net migration over time.

The forecast input data comes from OFM’s long-term forecast of the state traded sector employment, the Office of Forecast Council’s September 2002 short-term economic forecast for the state, and the **DRI-WEFA**’s October 2002 long-term economic forecast for California. Since the Forecast Council’s September employment forecast release, a reduction in the Weyerhaeuser workforce was announced and additional layoffs are expected in Boeing’s production line and service business. Should it appear that these or any other economic factors are substantially affecting population movement, the forecast may be revised.

Assumptions in *long term employment expectations* that determine migration are specified in more detail.

- **Washington is expected to out-perform the U.S. in the growth of the traded sector employment.** This makes Washington an attractive place, economically speaking, for potential migrants.
- **Growth in manufacturing employment in Washington is expected to perform better than in the U.S. and California.** The forecasts for California and the U.S. show a long-run decline in manufacturing employment. In Washington, manufacturing employment is predicted to maintain a small but positive rate of growth. Historically, manufacturing employment in Washington, excluding aerospace and lumber and wood products, has always grown faster than in the U.S. This trend is expected to continue.
- **Employment growth in traded services in Washington is expected to perform better than the U.S. traded services employment in the early years of the forecast.** Historically, Washington has experienced significantly faster employment growth in producer services than the U.S. This is expected to continue with the difference declining. In the last ten years of the forecast period, the producer services sector in Washington is projected to grow at about the same rate as the U.S.

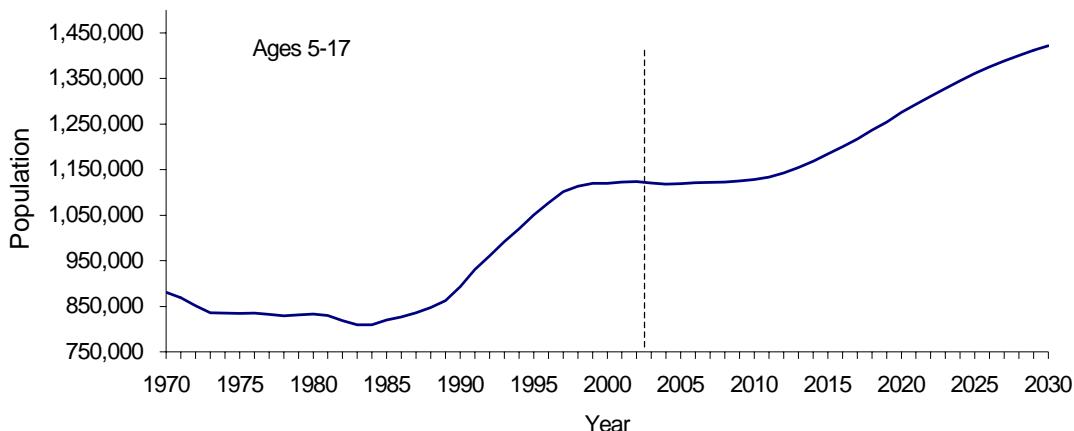

Population in Selected Age Groups

Changes in the number of persons in selected age groups will place new demands on and make new contributions to society, the economy, and government. Of special interest are: children ages 5 through 17; young adults ages 18 through 24; various groups of working-age adults, ages 18 through 64; and the elder population, ages 65 and over.

School-Age Children

There are an estimated 1,123,300 youngsters aged 5 to 17 in 2002. Growth will continue to be relatively slow through 2013 and then increase rapidly as the “Baby Boom echo” children reach childbearing age.

The school-age population will grow in the early part of the forecast period, level off in the middle, then continue its growth later

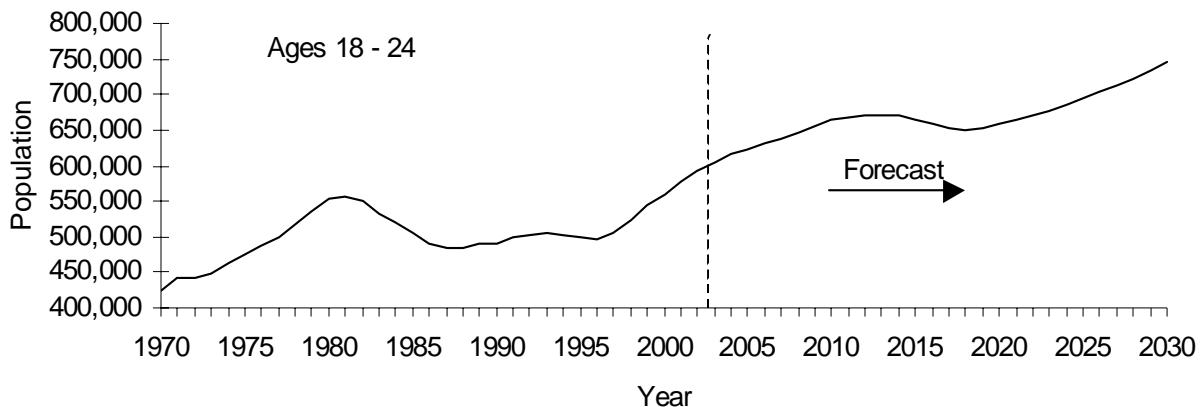

OFM FORECASTING DIVISION

NOVEMBER 2002

Young Adults

After a long-term decline, the number of young adults ages 18 to 24 began to increase in 1997. There are an estimated 591,900 persons age 18 to 24 in 2002. This age group has now exceeded its prior peak of nearly 560,000 and will continue increasing through 2012. Post-secondary educational institutions should experience enrollment pressure as the size of the young adult population increases.

Young adults reached a low in 1996 and started to grow steadily from 1997

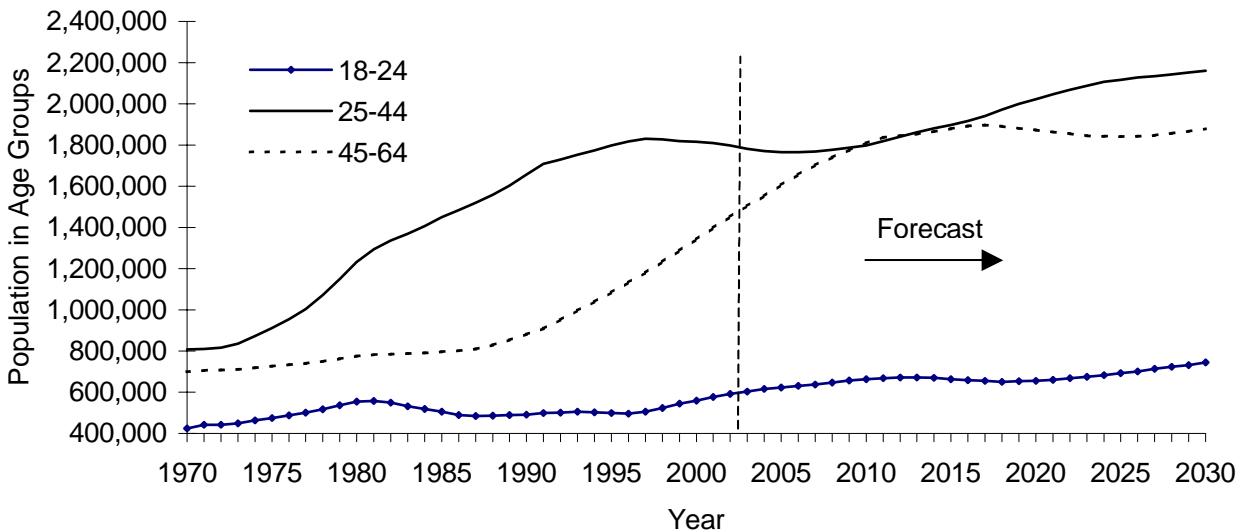

OFM FORECASTING DIVISION

NOVEMBER 2002

Working Age Adults

Persons 25 to 44, totaling 1,797,900 in 2002, should exceed 2 million by 2020. Older workers, persons between 45 and 64, will grow by nearly half a million in less than 20 years as the Baby Boom generation ages – from 1,452,000 in 2002 to a peak of 1,897,100 in 2017.

Working-age adults in their prime earning years will increase in number

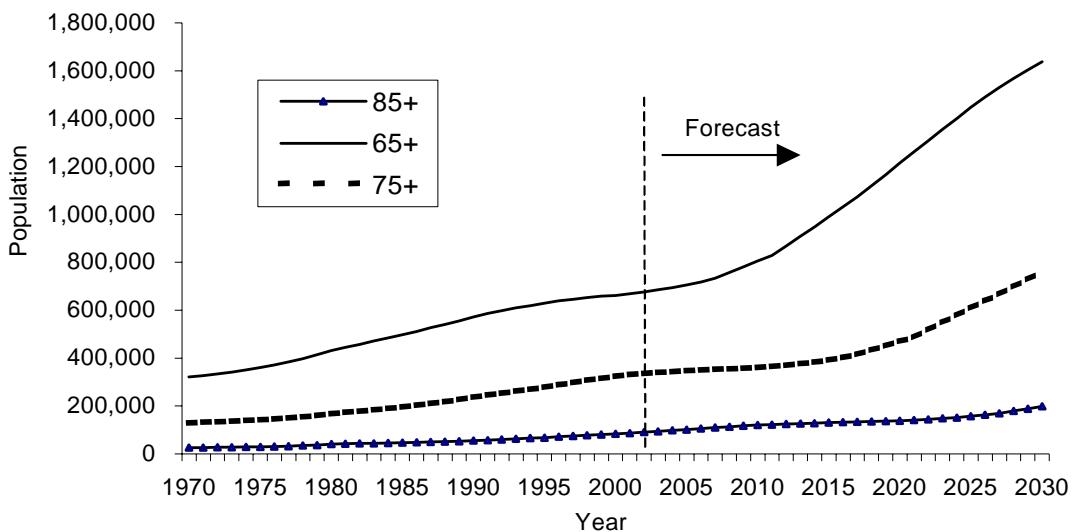

OFM FORECASTING DIVISION

NOVEMBER 2002

Elderly Population

Washington's population age 65 and over, estimated at 677,300 in 2002, is expected to reach 806,200 by 2010 and 1.2 million by the year 2020. The population age 75 and over shows the most rapid growth after 2015 when the Baby Boom generation has its impact. Persons age 85 and over are estimated at 91,200 in 2002 and are expected to reach 139,200 by 2020, and nearly 200,000 by 2030.

The elderly population will grow rapidly after 2005
